

ABSTRACT OF THE DISCLOSURE:

**TITLE: SYSTEM AND METHOD FOR MAINTAINING TARGET
 RESPONSE TIMES IN BUSINESS METHODS**

 An embodiment of the present invention provides
a method to establish and maintain response time goals
for selected business logic contained in components,
which results in chosen high priority methods that
5 respond consistently under load, enable smoother server
side resource utilization, and increased scalability.
The analyzing and delaying of certain processes in order
to expedite processing of more important business
processes helps establish optimization of multiple
10 business processes.
